Sprint 3 - Team 11

Change note

What the field research changed in our plan. Pages revised: project charter and business case.

What changed

Earlier page	What it assumed	What we changed	Why	Evidence
Business case	Budgeting is at the core of our app	Budgeting is no longer core. Instead, we show total cost.	Answers didn't indicate people split every cost down part by part. They look at total cost.	E-01, E-02, E-03
Project charter and business case	All users will pay $1.99 to enter	We should have a free tier with limited functionality. The paid tier stays at $1.99, with an easy upgrade.	Wanderlog already covers itineraries and budget, so people may use that over something that costs $1.99.	E-01, E-02, E-04
Project charter and business case	AI is not a big part	An AI assistant will be incorporated to assist.	Most interviewees used AI, and Wanderlog has one too.	E-01, E-02, E-04

Facts from the evidence

#	Fact	Evidence
1	0 of 3 interviewees mentioned budgeting.	E-01, E-02, E-03
2	0 of 3 mentioned Wanderlog or any trip-planner app. All 3 used social platforms or Maps for discovery.	E-01, E-02, E-03
3	Wanderlog's free tier covers building an itinerary, and it has a budget tool.	E-04
4	Google Maps already saves places into lists and lets people share them. It does not make a total budget or a day-by-day itinerary.	E-05
5	Only P1 pays for AI ($20/month). P3's $25 is an internet bill. P2 spends nothing on planning.	E-01, E-02, E-03
6	P3 found her event on Instagram, planned immediately, and says she needs a planner for her next trip.	E-03
7	P1 had trouble getting help from third-party booking sites when errors occurred.	E-01
8	Wanderlog offers a flight booking step, which supports the flight data assumption.	E-04
