Sprint 3 - Team 11

Evidence log

One row for each interview or teardown. Interviewees are coded P1 to P3. Tier 1 = first-hand evidence, Tier 2 = public page (URL and access date), Tier 3 = claim.

ID	Type	Source	Competitor type	Collected by	Date	URL and access date	Tier
E-01	Interview	P1 (Peru trip)	Mixed	Whole team, together	10/13/2026	N/A	1
E-02	Interview	P2 (Seattle trip)	Mixed	Whole team, together	10/13/2026	N/A	1
E-03	Interview	P3 (Albuquerque road trip)	Mixed	Whole team, together	10/13/2026	N/A	1
E-04	Teardown	Wanderlog	Direct	Marc Buster	10/19/2026 (about 40 min)	https://wanderlog.com/ (accessed 10/19/2026)	1 for hands-on use; pricing and company facts are Tier 2/3
E-05	Teardown	Google Maps	Indirect	Omar Paz	10/19/2026 (about 30 min)	https://maps.google.com/ ; https://support.google.com/maps/ ; https://developers.google.com/maps/billing-and-pricing/pricing (accessed 10/19/2026)	1 for hands-on use; cited claims are Tier 2
E-06	Teardown (derived)	Status quo: manual multi-app planning	Status quo	Joy Ross	10/19/2026 (about 30 min, estimated)	N/A	1 only as far as it restates E-01 to E-03

Findings

ID	What people did / what was done	Opinions and claims	Caveats
E-01	Planned a Peru trip and booked flights immediately. Used TikTok to research nearby attractions. Booked the hotel through Hilton (has a Hilton credit card). Chose flights by price, preferring no connections. Used Booking.com and Priceline. Had trouble with third parties: could not cancel, little help when errors occurred. Used ChatGPT (notes also list Claude and Gemini). Pays about $20/month for AI.	AI saves a lot of time. "Direct is better" than third parties. Said nothing would stop him from using AI (a hypothetical).	Unclear whether the $20 covers one AI tool or several.
E-02	Used TikTok to find places to go and Google Maps for reviews. Used ChatGPT. Learned about the city by asking people and from the Instagram For You page. Spent no money on planning.	Seattle was easy to plan (many things to do, easy city to navigate). TikTok is familiar and easy to search. Instagram is difficult to search. Google Maps is easy to share.	The trip was about 2 years ago per one set of notes, so it is an older memory. Whether P2 pays for AI was not recorded.
E-03	Took a 2-day road trip to Albuquerque in June 2026, built around an event found on Instagram about 2 weeks earlier. Reserved the hotel, then asked friends who wanted to go. Booked the hotel through Expedia. Asked her dad for points. Considered Airbnb and ended up traveling alone. Instagram was the main source of event information. Has another trip (Tempe) coming up.	Airbnb was not worth it for 2 days. A hotel was the better, more affordable option. Instagram is reliable for events because organizers post frequently. She needs a planner for the next trip.	No AI or planning-tool spending recorded. Her $25/month is her internet bill, not an AI cost.
E-04	Signed up (about 2 min). Entered trip dates and location (5). Explored features (3). Went through the booking step for hotel, flights and cars (10). Built a day-by-day itinerary (15). Built a budget (5). Could plan a full trip without Pro. Could invite others to the trip. Could explore the area for things to do. The AI assistant appeared capped at 10 messages.	Claims: free tier; Pro is $39.99/year (offline maps, export to Google Maps, route optimization); revenue from subscriptions; Y Combinator W2019, founders Peter Xu and Harry Yu; $1.5M seed (some sites say about $1.65M); team size unclear (5 vs 11 to 50).	Pricing and company facts are claims from public pages, not yet checked on Wanderlog's pricing page. Not named by any interviewee. Unclear how the budget tool relates to the itinerary.
E-05	Signed in, searched a destination, searched attractions and restaurants (about 8 min), looked at reviews, photos and hours, saved places to a trip list, compared travel time with directions. Used the main features free. Maps did not calculate a total budget. The saved list did not make a day-by-day itinerary. Had to move between search, saved places and directions.	Many results can feel overwhelming. Claims: shared lists can be edited by others; Explore feature; saved lists capped at 3,000 entries; Maps Platform charges businesses pay-as-you-go.	Cited claims come from Google's public pages. Named by one interviewee (P2).

ID	What people did / what was done	Opinions and claims	Caveats
E-06	Built from E-01 to E-03, not from a hands-on attempt. Pattern: pick a destination from a social post or recommendation; find activities on TikTok, Instagram or Google Maps; check reviews on Google Maps; book through a booking site or direct. Free to use.	Social platforms are good for discovery. AI saves time (from E-01).	Not an independent teardown. Step times are estimates.
