Sprint 3 - Team 11

Risk entries

Three things that could sink the plan, and how we will know. Evidence IDs refer to our evidence log.

#	Risk	Trigger	Owner	Mitigation	Evidence
1	Travelers keep using free social apps, Maps and AI instead of adopting a dedicated planner (status quo inertia)	In follow-up interviews, fewer than 2 of 5 describe a planning failure (lost time, money or a missed booking) costly enough to change habit. So far: P1 had trouble getting help from booking sites, P3 says she needs a planner, no one described a cost problem.	Kaitlin	Run follow-up interviews built on last-time stories. Ask P3 how the Tempe trip goes and what tools P3 uses. Compare a prototype itinerary against what people do today.	E-01, E-02, E-03, E-06
2	The budget and total-cost feature has no direct demand evidence, and competitors partly cover it	In the next 5 interviews, fewer than 2 describe tracking or overspending a trip budget or total trip cost as a problem. So far 0 of 3 mention budgeting.	Luis	Add "how did you keep track of what the trip cost?" to the guide. Test Wanderlog's budget tool further. Decide whether to reposition based on the answers.	E-01 to E-05
3	Willingness to pay is unproven	Fewer than 3 of 10 interviewees currently pay for any trip-planning tool, or a pricing test shows resistance above the Wanderlog Pro anchor (about $40/year, claim). So far: P1 pays about $20/month for AI, P2 pays nothing, P3 has no spending recorded.	Marc	Ask "what did you spend on planning the last trip?" in every interview. Test a free tier plus a paid upgrade. Verify Wanderlog pricing from its pricing page.	E-01 to E-04
